

ABSTRACT OF THE DISCLOSURE

A data processing system includes a communication network, a data processing apparatus connectable to the network, and a communication terminal connectable to the network. Further, the system includes a job information receiver for receiving job information supplied from the communication terminal via the network, where the job information is related to a required procedure performed by the data processing apparatus. Still further, the system includes a job information register for registering the received job information, a job information specifier for specifying the job information registered in the job information register, and a procedure controller for controlling the above-mentioned required procedure based on the specified job information.
